

- Maximizes Corn Yields
- Available N-P-K Row Starter
- Includes AVAIL® Phosphorus Technology
- Includes Zinc
- Low-Salt
- Non-Corrosive
- Low Application Rates
- Saves Time

FOR MORE INFORMATION:

Making Your PHOSPHORUS More Efficient!

WHAT IS SEASON PASS® Row Starter?

- True N-P-K Row Starter
- Low Salt & Non-Corrosive Formulation
- Provides Available N-P-K In The Root Zone
- Includes AVAIL® Technology
- Can lower moisture at harvest, reducing drying costs

With **SEASON PASS Row Starter**, you have the ability to apply a high quality starter directly on the seed of your corn plant in a low volume rate with a **NON-CORROSIVE** material. This provides more timely and hassle free plantings.

With 5 gallons of **SEASON PASS Row Starter**, you will be placing 10 lbs. of available P in furrow to feed that plant, to help maximize your corn yield.

Also, with **AVAIL** making the phosphorus **AVAIL-able** for a longer period of time, you have one of the most efficient P sources on the market today for your corn crop.

SEASON PASS Row Starter comes standard with .05% EDTA Zinc per gallon. Zinc is critical in corn production. It aids in phosphorus uptake, helps increase depth of kernel on the ear, and is vital to increasing test weight in your corn crop.

Nitrogen	6%
Phosphorus	18%
Soluble Potash ...	6%
Sulfur	1%
EDTA Zinc05%

SEASON PASS ROW STARTER MAKES YOUR PHOSPHORUS AVAIL-ABLE LONGER WITH

AVAIL®

PHOSPHORUS is vital to maximizing your corn plant's yield potential. Yet phosphorus is inefficient and immobile in the soil. *PCS states: "The maximum number of kernels per ear harvested is determined by the corn plant's five leaf stage and is directly impacted by the percentage phosphorus in the plant tissue at that time."*

SEASON PASS Row Starter delivers the available phosphorus your corn needs to maximize yields by this critical stage!

- Increases the potential for more phosphorus to be absorbed by the plants' root system
- Inhibits fixation of phosphate fertilizer, promoting absorption of phosphorus
- Reduces phosphate fixation and boosts potential yields
